bidim[®]

TABLETS

Overweight is a risk factor for our health and a predisposing condition for chronic diseases as diabetes, hypertension and joint diseases. Thanks to its titrated and concentrated components, bidim helps to reduce weight.

- 1) it reduces water retention, favoring the reduction of cellulite and the blemishes related to it (orange peel)
- 2) it reduces fat storage, promoting the metabolism and consumption
- 3) it increases the feeling of satiety, reducing the search for food and the craving for sweet
- 4) it increases thermogenesis (calorie consumption), improving lean body mass / fat mass ratio

Posology: 1 tablet per day during the main meal

20 tablets of 700 mg

for the treatment of

- obesity
- overweight
- cellulite
- emotional eating
- abdominal bloating

BIDIM

bidim[®]
COMPRESSE

BROMELAIN

It is widely used in the treatment of cellulite. Cellulite is a morphological alteration caused by an increase of subcutaneous fat accompanied by stagnation of fluid in the interstitial spaces. Bromelain helps drain fluids thus reducing cellulite. Proteolytic action aids digestion by reducing the swelling sense.

GARCINIA CAMBODIA

Hydroxycitric acid content blocks the synthesis of cholesterol and fatty acids. It promotes the metabolism of fat storage by stimulating satiety. It controls the level of cortisol reducing stress and the insatiable desire for sweets.

CITRUS AURANTIUM

Its active ingredients, especially synephrine, reduce body fat by activating activity thermogenic thanks to the beta 3 adrenergic receptor stimulation of adipose tissue, thus improving the ratio fat/lean mass. Increasing thermogenesis increases the consumption of calories derived from fat tissue.
