ReLive® INTENSIVE

ANTI-REDNESS, SOOTHING, AND MOISTURISING CREAM FOR SENSITIVE SKIN

Relive contains no parabens or perfume and uses a mix of active ingredients characterized by a marked anti free radical action combined with a decongestant and soothing activity. Besides the content of omega 3 fatty acids and omega 6 helps the irritated skin to find a right balance. Relive Intensive can be used as coadjuvant in the most frequent skin problems such as redness, irritations and any alterations linked to an increase in free radicals or only to prevent skin aging, wrinkles, expression lines and the daily care of dry skin, reddened and potentially atopic.

- 1- It is indicated to soothe the main symptoms of skin disreactivity such as atopic dermatitis, seborrheic dermatitis, contact dermatitis and/or eczema.
- 2- During pregnancy (and in all cases of sudden increase/decrease of weight) it is optimal to prevent the onset of stretch marks.
- 3- Thanks to its natural and tested formulation, it can be applied in complete safety even to the skin of children suffering from atopic dermatitis, seborrheic, contact, cold or diaper use.
- 4- it plays a decisive soothing action in favor of reddened skin by wind, sun (it is also excellent to treat slight burns), and against the itchings caused by insect bites.
- 5- It reduces burning skin resulting in radiation therapies.

Dosage: 2 or 3 applications a day

per la cura di

- Atopic dermatitis
- Allergic dermatitis
- Inflammatory dermatitis
- Seborrhoeic dermatitis
- Contact dermatitis
- Weather-related dermatitis

- Herpes vulvitis
- Mycotic vulvovaginitis
- Intimate itching
- Burns
- Keratosis
- Rosacea treatment adjuvant

RELIVE

CONFEZIONE
DA 50 ML.

CONFEZIONE
DA 25 ML.

RESVERATROL:

protects the skin thanks to its antioxidant activity and its inhibitory action on apoptosis and consequent mitochondrial dysfunction. (1)

It can delay skin ageing mechanisms. (1)

Effective in multifactorial skin disorders, especially in the presence of inflammation, acting as a radical scavenger. (2)

GLYCYRRHETIC ACID: anti-inflammatory activity as it enhances the cortisol activity by inhibiting 11beta-hydroxysteroid dehydrogenases, which converts endogenous cortisol into its inactive form. It inhibits the release of histamine, leukotrienes, and prostaglandin E2 (3)

BOSWELLIC ACID: antiphlogistic, moisturising, and soothing properties. It enhances skin elasticity, inhibiting elastase and stimulating fibroblasts to produce new connective tissue.

It also inhibits leukocytes in the inflammation site that lead to striae rubrae. (4)

BORAGE OIL: rich in Omega 3 and Omega 6, polyunsaturated fatty acids, which constitute cell membrane phospholipids and, therefore, are essential to prevent and treat skin irritations.

TEA TREE OIL: antiseptic, antifungal, antibacterial, and natural antiviral properties. (5) Useful adjuvant in the event of skin irritations with superinfections.

ALLANTOIN: its moisturising and exfoliating activity promotes cell regeneration.

VITIS VINIFERA: features outstanding emollient, soothing, and antioxidant properties. The presence of anthocyanins and flavonoids ensures the angioprotective action against rosacea.

BISABOLOL: this active ingredient derives from chamomile essential oil and features antiphlogistic properties that are particularly indicated in acute dermatosis, contact dermatitis, and allergic rashes.
